

**What Is Claimed Is:**

1. A computer system for customizing form elements in a form building application,  
comprising:
  - 5 a form builder component configured to receive an identification of a user of the form building application, the form building application providing a graphical user interface for the manipulation of a set of form elements, and to enable access to a subset of the form elements according to authorization rules; and
  - an access manager component configured to determine the authorization rules associated  
10 with the user.
2. The system of claim 1, wherein the identification of the user is based on login information.
3. The system of claim 1, wherein the authorization rules are determined via a lookup table  
15 associating the user identification with the authorization rules for the user.
4. The system of claim 3, wherein the authorization rules include settings that identify the subset of the form elements which are viewable and/or changeable.
- 20 5. A computer-implemented method for customizing form elements in a form building application, comprising:
  - receiving an identification of a user of the form building application, the form building application providing a graphical user interface for the manipulation of a set of form elements;
  - 25 determining authorization rules associated with the user; and
  - enabling access to a subset of the form elements according to the authorization rules.
6. The method of claim 5, wherein the identification of the user is based on login information.
- 30 7. The method of claim 5, wherein the authorization rules are determined via a lookup table associating the user identification with the authorization rules for the user.

8. The method of claim 7, wherein the authorization rules include settings that identify the subset of the form elements which are viewable and/or changeable.
- 5 9. A computer-implemented method for customizing an electronic form, comprising:  
responsive to a command by a user to change an element of the form, retrieving a  
permission list from a lookup table, the permission list identifying access rights for a  
plurality of form elements contained in the form;  
comparing an identifier associated with the user to those the access rights for the form  
10 element to be changed; and  
rejecting the command unless the access rights associated with the user's identifier permit  
the user to change the form element.
10. The method of claim 9, wherein the command by the user to change the form element  
15 includes selecting in a form building application a node representing the form element.
11. The method of claim 9, wherein the access rights are defined for form elements representing  
a form's corporate identity.
- 20 12. The method of claim 9, wherein the access rights are defined for form elements representing  
a form's interface to an application program.
13. The method of claim 9, wherein the access rights are defined based on at least one of user id,  
job title, department code and position in the corporate hierarchy.
